

# Terminal Cheat Sheet

## General stuff:

<code>cd my_folder</code>	navigate in the "my_folder" directly. You can do <code>cd ../</code> to go up one level
<code>ls</code>	list the contents of the current directory
<code>mkdir new_folder</code>	make a directory called "new_folder"

## Node Package Manager:

<code>npm install --save package_name</code>	install a new library for your project. To install a library globally to your whole computer, use -g instead of --save
<code>npm start</code>	start the React server!
<code>npm run build</code>	build your react project!

## Git:

<code>git add .</code>	add your work to git
<code>git commit -m "type a message"</code>	commit to git
<code>git push origin master</code>	push to github!
